Q1 2019

- ▶ The pulp industry showed a tendency toward recovery in demand at the end of the 1Q, especially in China
- ▶ Asian markets and paper producers were cautious in purchasing raw material, due to the uncertainty of ongoing trade war negotiations and high inventories
- ▶ European markets activity was characterized by a low demand and high inventory levels in the ports

PULP BUSINESS

Outlook

- ▶ For the next quarter, the scenario looks complicated, mainly due to the following reasons:
 - The start of the low demand season, which is starting earlier than 2018
 - The trade war between US and China without final agreement
 - High level of inventories

- ▶ Markets uncertainty is triggering price adjustments and announcements of production reduction (Brazil)

Q1 2019

- ▶ Composite panels sales volume showed a slight decrease, partially offset by a rise in average prices. While MDF demand in the Brazilian market was negatively affected by political and economic factors, Argentina stabilized. In US and Canada, sales were higher than the previous quarter
- ▶ In Sawn timber, demand in Asia and Middle East remained low, as a result of higher supply from Europe, Canada and Brazil. Remanufactured products in the Northern Hemisphere were in high demand as a result of positive seasonal effects
- ▶ The Plywood scenario did not change significantly, with high competition from South America and Asia and therefore, lower prices. Additionally, OSB is increasing its share in the plywood market

Production and Sales Volume

WOOD PRODUCTS BUSINESS

Outlook

Housing Starts Index at 1.2 million units per year as of March 2019

PB/MDP: the demand is expected to remain positive, better than in the first quarter, mainly influenced by positive seasonal effects and slightly lower production.

Remanufactured products: the demand is expected to increase in the next months, mainly due to better weather conditions and to the positive impact of the new duties imposed to China.

Plywood: sales volume are expected to remain healthy in the coming months, however, the oversupply from Brazil, Chile and others, is expected to keep affecting negatively the prices.

North
America
54%

WOOD PRODUCTS BUSINESS

Outlook

Central and
South America
31%

Brazil: the scenario looks challenging for the coming months, due to slow economy, sluggish consumption of panels and increasing production capacity of other Brazilian competitors.

Argentina: sales volume are expected to recover. Inflation and the devaluation of the Argentine peso will continue keeping USD margins in a negative trend

Chile: for composite panels, the outlook remains positive, expecting steady sales volume. Plywood will remain a challenge, due to local oversupply and a slightly lower growth expected for the construction industry.

Asia and
Oceania
10%

Asia: this market is definitely facing the biggest uncertainty as the trade war between China and US remains to be resolved. After the last announcements made by both parties in the last months, the outlook has showed nothing but uncertainty for the next period. The forecast could change depending on the final negotiations.

Europe and
Middle East
5%

Europe: plywood market is expected to keep showing low demand and low prices, mainly affected by the significant oversupply from Brazilian and European competitors. This situation is expected to be marginally offset by the positive seasonal effects in the coming months.

Middle East: as a consequence of the lower demand in Europe and China, damage wood by storms and some forestry diseases, there is big pressure mainly from European and Brazilian suppliers to allocate higher volumes in this market. As a result, prices are expected to continue going downwards
